*Math Demos on the Go.*

In the early 2000s, Demos with Positive Impact was developed as a collection of online instructional demonstrations for teaching mathematics. Over the years, the collection has continued to be a valuable resource for mathematics faculty and students. To support users in today's mobile climate, several of the demos have been adapted to embrace tablet devices. This session will present several of these web-based adaptations which utilize HTML5 and Javascript utilities for mathematical display and interactivity. (Received September 25, 2012)
