As Chair of the Planning Committee for Mathematics Awareness Month 2013, whose theme was "The Mathematics of Sustainability," I will discuss the process of developing the materials for Mathematics Awareness Month. Serendipity played an unexpected role in the process of commissioning essays that explained how mathematics gets used in sustainability from a wide range of authors. I will also share my experiences incorporating issues of sustainability into teaching, at a variety of levels, including the use of service learning projects in which students used their math skills to green their school or community.
