Sean D Lawton* (slawton3@gmu.edu), Department of Mathematical Sciences, 4400 University Dr, Exploratory Hall, 4400, Fairfax, VA 22030, and **Krishnendu Gongopadhyay** (krishnendu@iisermohali.ac.in), Knowledge City, Sector 81, SAS Nagar, Manauli PO 140306, Mohali, India. *Invariants of pairs in $SL(4, C)$ and $SU(3, 1)$.*

We describe a minimal global coordinate system of order 30 on the $SL(4, C)$ -character variety of a rank 2 free group. Using symmetry within this system, we obtain a smaller collection of 22 coordinates subject to 5 further real relations that determine conjugation classes of generic pairs of matrices in $SU(3, 1)$.
