**Pamela E Harris\*** (peh2@williams.edu), Bronfman #204, 18 Hoskey Street, Williamstown, MA 01267, and **Erik Insko** and **Mohamed Omar**. *The  $q$ -analog of Kostant's partition function and the highest root of the simple Lie algebras.*

Kostant's partition function counts the number of ways to represent a particular vector (weight) as a nonnegative integral sum of positive roots of a Lie algebra. For a given weight the  $q$ -analog of Kostant's partition function is a polynomial where the coefficient of  $q^k$  is the number of ways the weight can be written as a nonnegative integral sum of exactly  $k$  positive roots. In this talk, we present generating functions for the  $q$ -analog of Kostant's partition function when the weight in question is the highest root of the classical Lie algebras of types  $B$ ,  $C$ , and  $D$ , and the exceptional Lie algebras of type  $G_2$ ,  $F_4$ ,  $E_6$ ,  $E_7$ , and  $E_8$ .
