

1125-VB-2057 **Kit C. Chan** (kchan@bgsu.edu) and **David Walmsley*** (byrned@bgsu.edu). *A Constructive Approach to the Universality Criterion for Semigroups.*

A constructive approach to the Universality Criterion leads to some classical results, such as the universality of a Blaschke product for a sequence of composition operators. Using this approach, we also obtain some new results for the operator algebra of a Hilbert space. (Received September 19, 2016)
