Ram U. Verma* (verma99@msn.com), Denton, TX 76205. *Chain Rule - A Wonderful Mind Imaging*. Preliminary report.

The general perception for the Chain Rule is based on the principle of symbolic cancellation which connects (conceptually) the derivative of a function with the derivative of a composite function in our calculus instruction. In fact, the Chain Rule is a more deeper imagination of human minds rather than just a symbolic cancellation procedure, this what (maybe) Newton and Leibniz had in mind more than three centuries ago.
