**Ashley Erin Meek\*** ([ashley.meek@ttu.edu](mailto:ashley.meek@ttu.edu)) and **Victoria E Howle**. *Block Preconditioning for Time-Dependent Coupled Fluid Flow Problems.*

We examine block preconditioners for time-dependent incompressible Navier-Stokes problems and some related coupled problems. In some time-dependent problems, explicit time stepping methods can require much smaller time steps for stability than are needed for reasonable accuracy. This leads to taking many more time steps than would otherwise be needed. With implicit time stepping methods, we can take larger steps, but at the price of needing to solve large linear systems at each time step. We consider implicit Runge-Kutta (IRK) methods. Suppose our PDE has been linearized and discretized with  $N$  degrees of freedom. Using an  $s$ -stage IRK method leads to an  $sN \times sN$  linear system that must be solve at each time step. These linear systems are block  $s \times s$  systems, where each block is  $N \times N$ . We investigate preconditioners for such systems, where we take advantage of the fact that each subblock is related to a linear system from the (coupled) fluid flow equations.
