John M Zhang* (jmzhang@math.ucla.edu), UCLA Department of Mathematics, Box 951555,
Los Angeles, CA 90095. *An introduction to derivators.*

We introduce the theory of derivators, which can be seen as an enhancement of traditional derived categories. We then discuss how we can use derivators to extend Happel's result on derived equivalences of certain quivers. (Received September 21, 2017)
