In her memoir *Becoming*, Michelle Obama calls attention to two women she admired in the workforce who “didn’t try to compartmentalize work and home.” Obama’s voice lends credibility to a path some mothers in mathematics adopt. But what does this look like? And what are the outcomes of a life at the intersection of mathematics and motherhood? This talk by a mother-daughter duo explores how one mom unwittingly combined her personal life as a mother with her professional career in mathematics and how it played out in the life of her daughter. Looking further, we identify trends in the worldviews of some of these children-now-adults who grew up with “math moms.” (Received September 14, 2019)
