73034. *Euclidean Squared Distance Matrices*. Preliminary report.

Distance geometry deals with the configuration of n points in metric space. For points x_1, \dots, x_n in Euclidean space, then $(A)_{i,j} = \|x_i - x_j\|^2_{i,j}$ is the corresponding Euclidean Squared-Distance (ESD) matrix. Recent results involving ESD matrices will be presented, including some results involving the geometry of the convex cone of ESD matrices. (Received September 22, 2010)
