962-T1-382 Chris K Caldwell* (caldwell@utm.edu), Chris K. Caldwell, Department of Mathematics, University of Tennessee, Martin, Martin, TN 38238, and G. L Honaker. Palindromic Prime Pyramids.
Palindromic prime pyramids are sequences of primes where each term is a palindrome with the previous term as its central digits. For example, beginning with the primes two and five and adding two digits each term, the longest such sequences are as follows:

| 2 | 2 |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 929 | 929 | 5 | 5 | 5 |
| 39293 | 39293 | 151 | 353 | 757 |
| 7392937 | 3392933 | 31513 | 33533 | 37573 |
| 373929373 | 733929337 | 3315133 | 1335331 | 9375739 |

We use a simple heuristic based on the prime number theorem to estimate how long these sequences should be as a function of the step size and starting value. We then generalize to arbitrary bases and present the results of several computer searches. (Received September 13, 2000)
