Shipman** ([shipman@math.colostate.edu](mailto:shipman@math.colostate.edu)) and **Bethany Springer** ([springer@math.colostate.edu](mailto:springer@math.colostate.edu)). *A Point of Tangency Between Combinatorics and Differential Geometry.*

Our investigation of the transitivity properties of infinite de Bruijn sequences built by extension, under the action of a shift map, led us to observe that edges of de Bruijn graphs whose labelled vertices are arranged in sequential order on a circle envelop epicycloids.
