As part of Fairfield University's campus-wide initiative to promote integrative thinking two faculty members, one from Mathematics and one from Psychology, created faculty development workshops titled "Statistics for Everyone". The goal of these two-day summer workshops was to help faculty from a wide variety of disciplines to incorporate statistics and promote statistical literacy in their core and major courses. Through lectures, hands-on exercises and using available technology, the workshop provided valuable background material and teaching resources so that faculty across campus could more confidently integrate statistics and statistical thinking into their specific classes. This presentation will highlight the resources and materials presented to the more than 40 workshop participants, including those in the sciences, humanities, social sciences and professional schools, and discuss some of the successes and challenges of this type of initiative.
