Leonardo S. Digiosia* (digiosia@lclark.edu), 3002 North Mountain Road, Boise, ID. 83702, Boise, ID 83702, and **Lea Kenigsberg, Dylanger Pittman, Jay Habib** and **Weitao Zhu**. *The Log Convex Density Conjecture in Hyperbolic Space*.

The isoperimetric problem with a density or weighting seeks to enclose prescribed weighted area with minimum weighted perimeter. According to Chambers' recent proof of the Log Convex Density Conjecture, for many densities on R^n the answer is a sphere about the origin. We generalize his results from R^n to the H^n with related but different volume and perimeter densities. (Received September 07, 2016)
