Building the Pipeline From High School to College Mathematics.

We like π ” is a math club at Indian River high school in northern New York. It was formed with support from SUNY Potsdam and an MAA Dolciani grant. The club’s program emphasizes the fun and excitement of mathematics - an approach that is particularly successful with women and other under-represented groups. By describing the club’s structure and activities we introduce the philosophy of this broad approach to building the pipeline to mathematics. (Received September 19, 2016)
