Kouros Tavakoli* (ktavakoli@okcu.edu). *On the Compositions of Infinitely Many Holomorphic Functions.*

In this research, we studied the limit behavior of the compositions of infinitely many holomorphic functions. We found certain classes of functions for which the corresponding compositions have constant limits. Also, we investigated several examples to observe the limit behavior of the infinite compositions. The relevant geometric properties were studied too. (Received September 17, 2019)
