Taufiqar R Khan* (khan@clermson.edu), O-201 Martin Hall, Box 340975, School of Mathematical and Statistical Science, Clemson University, Clemson, SC 29634-0975, and **Shyla Rae Kupis** and **Vincent Barra**. *Machine learning approach for image reconstruction in electrical impedance tomography inverse problem*. Preliminary report.

In this presentation, we will introduce the inverse problem in electrical impedance tomography and describe the ill-posedness associated with the image reconstruction. We will then describe how machine learning approach can be used to solve the inverse problem. We will present the appropriate algorithm for machine learning approach and demonstrate the efficacy of the proposed technique using simulations. (Received September 16, 2019)
