

1154-97-1258 **Mike May*** (mike.may@slu.edu). *Making math more effective for business students, making adjustments from both sides (a SUMMIT-P collaboration).*

NSF 1625222

The SLU SUMMIT-P project looks at making basic mathematics more effective for business students. From the math side, subprojects include a business calculus text that uses Excel and follows the recommendations of the curriculum foundations project report of 2004. As well as a development of supplements to college algebra to make it business focused. From the business side subprojects involve efforts to diagnose and remediate students with weak math background and to develop dynamic visualizations with GeoGebra for use in business courses.
