Stephen G. Hartke* (hartke@unl.edu), Department of Mathematics, University of Nebraska,
Lincoln, NE 68588-0130. *Computer methods for finding graph decompositions*. Preliminary report.

In attacking many graph decomposition problems, it is natural to examine some specific finite cases to gain evidence supporting the conjecture. In this presentation, we will describe methods for computer search coming from integer programming and orderly generation for finding such decompositions. (Received September 18, 2007)
