Doug Ensley* (deensley@ship.edu) and **Barbara Kaskosz** (bkaskosz@math.uri.edu). *Steal this Applet!*

If you have ever wished you could “steal” a nice applet for your own website with problems, instructions and functionality specifically geared toward your course, then this proof-of-concept project is for you. In this presentation, we will present several “meta-applets” (designed at the calculus level) that can be customized through a simple graphical interface so that no programming is involved. Once customized, the resulting files simply are posted in any subdirectory of your website, and you will have successfully stolen, with our blessing, the applet for you own use. (Received September 06, 2007)
