Let $F(S)$ be the space of singular Euclidean metrics of area one on a surface S . We provide an embedding of $F(S)$ into the space of geodesic currents on S . This is similar to Bonahon's embedding of Teichmüller space into the space of geodesic currents; the length of a closed curve in a given singular flat metric is equal to the intersection number of this curve with the corresponding geodesic current. The closure of the image of this embedding is a compact set. We also give a description of the boundary at infinity. (Joint work with Moon Duchin and Chris Leininger.) (Received August 14, 2008)
