University Ave. Apt. 310, Provo, UT 84604, and **James P Dilts** (james.dilts@gmail.com), 1000 E 450 N #11, Provo, UT 84604. *An Introduction to Metacalibration and its Application to Multiple Bubble Problems.*

Metacalibration is an exciting new method in geometric optimization authored by Gary Lawlor of Brigham Young University. It is a generalization of calibrated geometries. We present metacalibration theory and discuss its application to multiple bubble problems. These problems ask which figure minimizes boundary among all figures that separately enclose a given set of volumes. (Received September 08, 2009)
